

Problem-Solution Fit

Date	04 July 2026
TeamID	
ProjectName	A Comprehensive Measure of Human Development
Maximum Marks	5 Marks

Problem-SolutionFit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes, just like the original visual template.

1. CUSTOMER SEGMENT(S)[CS] Governments, Policymakers, Researchers, NGOs, Educational Institutions, Students, International Development Organizations, Data Analysts	6. CUSTOMER LIMITATIONS Limited access to analytical tools, budget constraints, lack of technical expertise, limited datasets, and dependence on internet-enabled devices.	5. AVAILABLE SOLUTIONS Pros: UNDP reports and statistical databases provide reliable HDI information. Cons: Mostly descriptive, require manual interpretation, do not provide instant predictions or interactive analysis.
2. PROBLEMS / PAINS + ITS FREQUENCY [PR] Difficulty in accurately assessing a country's human development status, lack of quick prediction tools, dependence on manual analysis, and challenges in identifying development gaps. These issues occur frequently during policy planning and research	9.PROBLEMROOT/ CAUSE [RC] Lack of automated prediction systems, complex analysis of multiple indicators, insufficient awareness of development metrics, and reliance on traditional statistical reports.	7. BEHAVIOR + ITS INTENSITY [BE] Users frequently analyze development indicators, compare countries, and seek quick prediction results. High intensity during research, policy planning, and academic work.

3. TRIGGER TO ACT [TR]

Need to evaluate a country's development level, compare countries, support policy decisions, monitor development progress, and identify areas requiring improvement.

4. EMOTIONS BEFORE / AFTER [EM]

Before: Uncertainty, confusion, time-consuming analysis. **After:** Confidence, better decision-making, improved understanding, and faster evaluation.

10. YOUR SOLUTION [SL]

Develop a Machine Learning-based Human Development Index Prediction System that predicts the HDI category (Very High, High, Medium, or Low) using Life Expectancy, Mean Years of Schooling, Expected Years of Schooling, and GNI per Capita. The system provides fast, accurate, and user-friendly predictions to support policymakers, researchers, and organizations in making informed development decisions.

8. CHANNELS OF BEHAVIOR [CH]

Online: Web application, educational websites, government portals, research platforms. **Offline:** Universities, government departments, policy meetings, development workshops.
