

Project Demo Planning

Date	15 March 2026
Team ID	HDI-2024
Project Name	Human Development Index (HDI) Predictor
Maximum Marks	1 Mark

Project Demo Planning:

A well-structured demo plan ensures the project is presented effectively, covering all key aspects in a clear and organized manner. This document outlines the plan for demonstrating the HDI Predictor, including the flow of the demo, key features to highlight, and responsibilities of each team member.

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Introduction & Problem Statement	Introduce the project — explain what HDI is, the four indicators (life expectancy, income, education, and gender inequality), and why ML-based prediction is useful.	5	Knowledge
2	Solution Overview	Walk through the technical architecture — three layers: HTML frontend, Flask backend, and ML model.	5	Knowledge
3	Code Walkthrough	Open app.py and explain: load_dataset(), train_model(), classify().	5	Knowledge
4	Live Feature Demonstration	Run python app.py, open http://127.0.0.1:5000. Submit 3 test cases live on screen.	5	Knowledge
5	Deployment Demo	Open the live Render URL in the browser. Show the same prediction running on the deployed app. Briefly discuss the deployment process.	5	Knowledge
6	Scalability & Future Plans	Briefly cover current limitations (small dataset, no model persistence, no auth) and outline the three future phases.	5	Knowledge

Demo Flow Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Explain HDI, its four dimensions, UNDP tier thresholds, and why ML-based prediction is useful.
2	Solution Overview	Show folder structure and explain the three-layer architecture: frontend, backend, ML model.
3	Code Walkthrough	Walkthrough app.py and index.html — highlight load_dataset(), train_model(), classify().
4	Live Feature Demonstration	Fill the form with 3 test cases live on screen. Show Very High (0.93), Medium (0.59), and Low (0.25).
5	Deployment Demo	Open the live Render URL. Run the same prediction on the deployed version to confirm it works.
6	Q&A Session	Answer questions about model choice, dataset, deployment, and future enhancements.
